CLAIM/S

What we claim as our invention is:

The „4in1“ bags are bags with four color and function combinations, characterized by large color-fields (Fig. 2, no. 6) in different sizes and colors on either side of the bag body. Horizontally or vertically positioned on either color-field (Fig. 2, no. 6) are one or more flat pockets (Fig.1+2, no. 4), which can be opened by a zipper.

The „4in1“ bags are bags with four color and function combinations, characterized by a flap (Fig.1+2, no. 1) which is fixed in the middle seam (Fig. 2, no. 8) on top of the bag body. Both sides of the flap (Fig.1+2, no. 1) are colored differently and on both sides one or more flat pockets (Fig.1+2, no. 4), which can be opened by a zipper, are positioned either horizontally or vertically.

The „4in1“ bags are bags with four color and function combinations, characterized by the flap (Fig.1+2, no. 1) which can be swung over to either side of the bag body, in either direction, whereas the flap (Fig.1+2, no. 1) then covers the color field (fields (Fig. 2, no. 6) on one side and the color field (fields (Fig. 2, no. 6) on the other side of the bag body will get visible.

Therefore 4 different color and function combinations are possible. Of course this new function can be transferred to many kinds of bag bodies, either square, round, triangular or whatever shape they might have. Accordingly the shape of the flap can be square, round, triangular or any other shape.
